This is limited - wooden and metal replica. It has to be cocked after shot, just like real sniper gun. While you pull the bolt back and shoot, handle is slamming forward. In fact original Dragunov is semi automatic so it don't need to be cocked after single shot. Piston seals against the cylindre were made with aluminum. It gives much higher compression than in other standard cylinders, used in cheap spring replicas. Barrel is 590mm tight and is very precious. Unfortunately this replica has no scope in stock, but you can mount the side rail and even a real Dragunov scope. As the real sniper gun it shoos very accurate and for the lond distance. It has 570 fps in stock so it has to shoot great.

### Features:

- 25 round magazine
- 6 lbs weight (just like real one)
- spring cocking single action fire
- 570 fps in stock
