There are two new airsoft grenades on the market. First one is designed by Airsoft Innovations company, second one is made by Madbull. Tornado Airsoft Innovations hand grenade costs \$99,95. This is very innovation products, because all Airsoft grenades were exploding, they're not very efficient, sometimes pellets won't hit anyone in the range of explosion. Tornado grenade is different - it's spinning and shooting pellets for longer time than single explosion. It makes him very efficient weapon in the small rooms.

Here are some links to promotion videos:

The second one is Madbull grenade. They're made with special sponge and their weight is about 1 pound. They work just like real grenades - by pulling the pin and throwing grenade away. They're not expensive ones, they cost about \$10 each.
